

CASE 1

In this case, the dealer deals 2 kings to the player i.e the cards score is 20. where as he deals himself a 9 card.

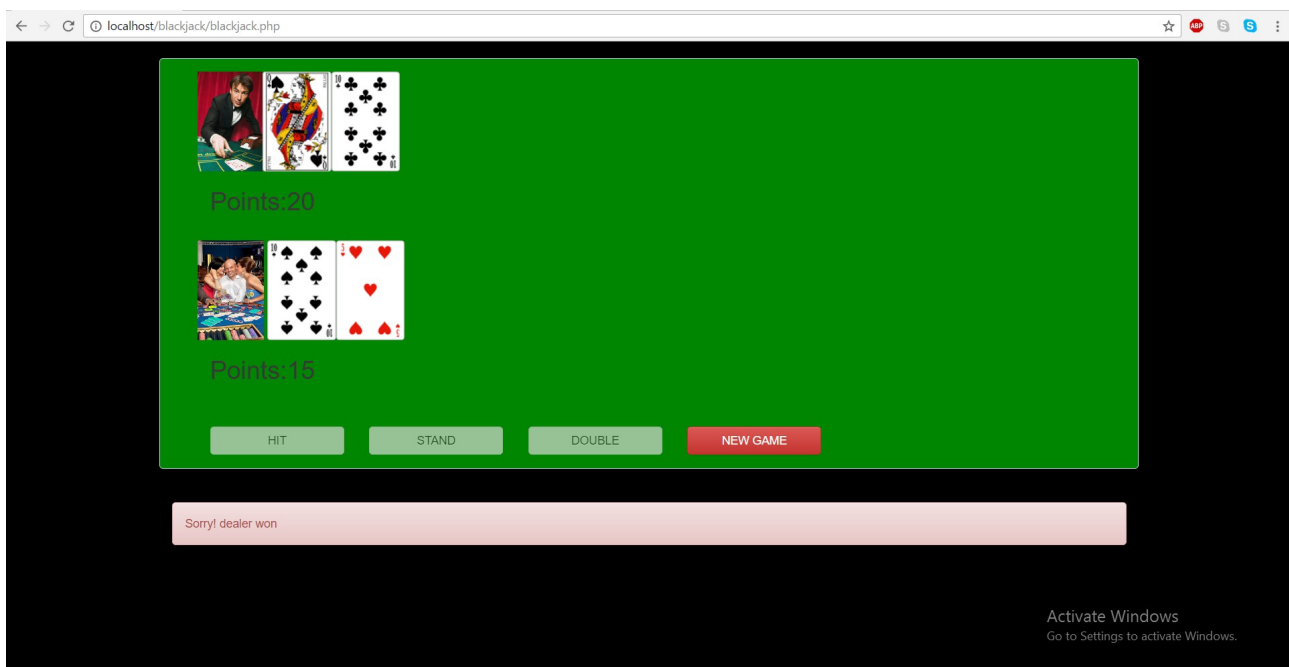

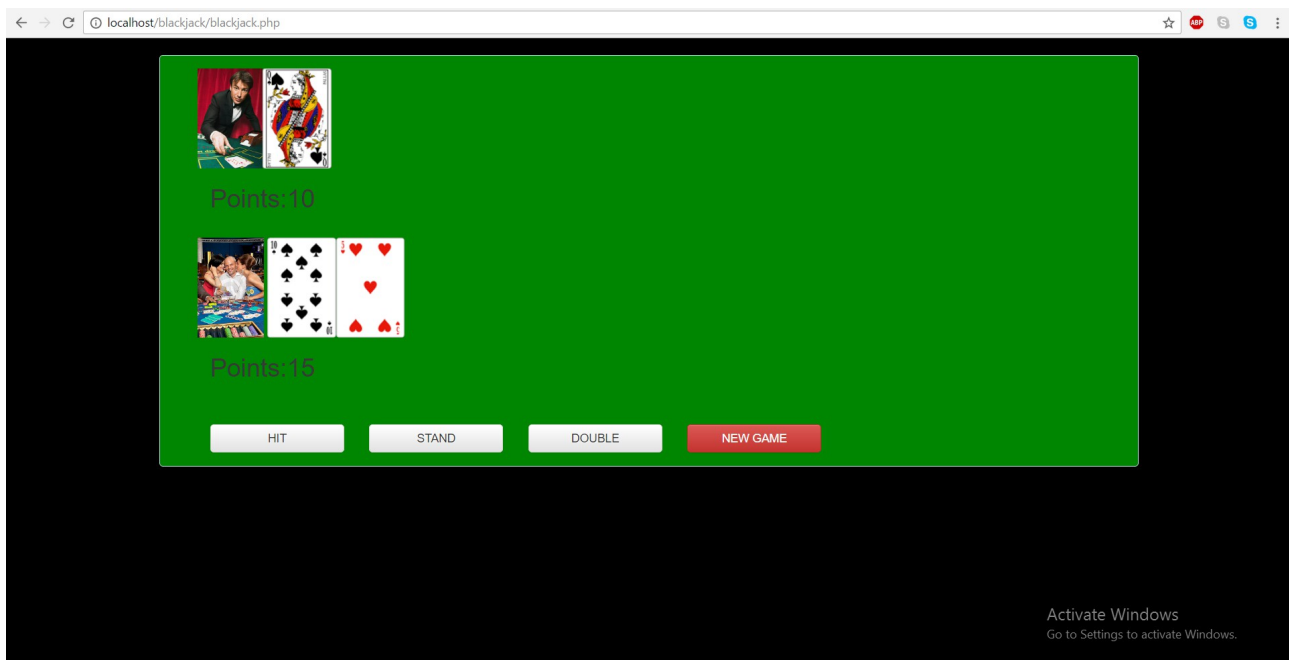

So me as a player decides to stand on 2 kings .

After that the dealer deals himself a 2 which makes his score 12. Which is less than my score.

So dealer again delas one more card to himself.which is a 10. but this makes his score 22. which means he is bursted.

And hence the player won.

CASE 2

in this case the dealer deals 10 and 5 to the user and queen for himself. ie. Score of 15 for user and 10 for himself

me as a user decide to stand on this score, (i know it a bad idea to stand on 15 when dealer has a face card but still just for the demo purpose)

then the dealer deals himself a 10 making his score 20 against my 15.

and so the dealer won.
